IV. NEED ANALYSIS :

With the development of civilisation, human needs too have been rising spirally. fulfillment of these needs requires their right identification, simulation and analysis of lot of relevant informations. Thus, the individual responsibilities of every responsible citizen have grown up to such a height as it has become difficult for him to handle them successfully. Human memory too has its own limitations. So, here comes the computer to help him in all kinds of decision making, whether it is highly complicated research work, war strategy, market speculations or day-to-day need of human life, etc. As a matter of fact, every individual activity involves some decision making. So the computer is the need of organizations as well as of an individual being. It will not be exaggeration if we say that it today is "Computer era". So is the need for developing a course for computer applications at diploma level. The course aims at developing personnel, capable of writing programmes in different high level languages, using the personal computer software available in the market, using the computer for scientific, engineering, research and development works as well as for commercial applications. It is supposed that such personnel will not face any dearth of employment because of ubiquitous use of computers.

The syllabus for diploma in Computer Applications has been developed to meet the above mentioned aims. Obviously achievement of any aim requires knowledge of the means and procedures of their utilization. With this view, various courses have been carefully selected and their length and depth decided by the experienced experts of world of work.

V. PROFILE DEVELOPMENT :

A tool in the form of questionnaire for getting information about job potential, job opportunities, manpower requirements and job activities of diploma holders in Computer Applications was designed and sent to various organizations, industries, higher technological Institutions and Polytechnics. The response was not very much encouraging. So, efforts were made to get feed back through mutual interaction with the experts of above organizations, industries, higher technological institutes and polytechnics. The feed back, thus received was discussed and analyzed in a workshop and a draft curriculum was prepared adopting the following procedures :

1. Listing job potential and job activities.
2. Analysing activities, knowledge and skills.
3. Determining course objectives.
4. Planning horizontal and vertical organizations of the subjects.
5. Developing study and evaluation scheme.
6. Development of detailed course content and coverage time keeping in view the knowledge and skill requirements.
7. Determination of resource input in the form of human resource, space, equipment, etc.

The so prepared curriculum was sent for comments of experts of various higher technological institutions and senior personnels in industries. The suggestions, thus received, and those through personal contacts, have been incorporated where found suitable. Finally, the revised curriculum has been put before an expert Committee approved by the "Government of Uttar Pradesh" for its final approval. The Committee's suggestions, though very nominal, too have been respectfully incorporated to give it its final shape.

It is hoped that this revised curriculum for Diploma in Computer Applications will be useful in producing suitable middle level manpower for the world of work.

JOB POTENTIAL:

INTRODUCTION:

Computer industry is rapidly growing in India. There is a great need for personnel with specific knowledge and skills in this field. One can make distinction between those who manufacture and maintain computer system and those who use it. Those personnel who are involved in manufacture, testing, maintenance and installation of computer systems are generally called as system personnel. Those who use the computer system are generally known as user group or Applications group. The present curriculum is intended to produce the Application Programmers. The application programmers must have knowledge of the area of application as well as the knowledge of programming. Hence a Post Diploma Course in Computer Applications is suggested for the diploma pass outs in any discipline of Engineering and Technology.

JOB OPPORTUNITIES:

At the completion of this course, the student is trained for the following jobs/capacities :

1. System Operator
2. Programmer/Junior Programmer/Application Programmer.

JOB DESCRIPTION:

Following are the activities of a System Operator in the Computer Centres :

1. to operate the computer system and peripherals.
2. to help the users in operating the system.
3. to allocate resources to the users.
4. to schedule the work of the computer centre.
5. to monitor the environment of the computer centre.
6. to maintain log of the system.
7. to maintain preventive maintenance schedules.
8. to inform the appropriate persons in case of system break down and run system checks for proper working after it is set right.

Following are the activities of Programmers/Junior Programmers/Application Programmers.

1. to write working programmes from the specifications or flow charts prepared by the Programmer/System Analyst.
2. to write Flow Chart and Programmes independently for simple application
3. to execute programmes (Enter the programme, Edit the programme, Save the programme, Link the programme and

Corrected and Approved by B.T.E. On Dated 02.06.2015

Run the programme).

4. Debug the programmes.
5. Analyse a data processing problem to select an appropriate algorithm and construct a well structured computer programme.

COURSE OBJECTIVES:

The preceding section outlines the knowledge and the skills essential for a middle level computer applications personnel. In this section, all skills and knowledge are summarised. Course Objectives derived from the knowledge and skills required to perform different activities, lay foundation for planning educational programmes. All the objectives which deserve greater weightage are marked with asterisk. Following are the course objectives :-

1. KNOWLEDGE

On completion of the course, the student will acquire knowledge :

- to understand the functioning of different blocks of computer system ;
- to understand the functioning of different peripherals;
- of different computer languages like BASIC, 'C', COBOL and PASCAL language , Fortran, C++
- of analysis of a given problem and formulate an algorithm for solving it on a computer ;
- in related Mathematics so as to develop skill in analysing scientific/tehnological problems and programmes ;
- to apply the principles and techniques of data processing to data processing environment ;
- to on the computer centre. Organise computer cantre activities and maintain the records and documents ;
- to comprehand the total computer activities and grow with experience.

2. SKILL:

- to write programmes in good style, debug and document them and
- to operate computer and its peripherals.

I Semester

1.1 Components of Information Technology

(Common to Computer Science & Engineering, Diploma In Information Technology)

L T P
8 4 -

Rationale

Computers have become an integral part of modern industrial atmosphere. Every technician is supposed to be aware of the application of computers. A student having knowledge of popular software and computer peripherals will prove useful to accept any challenge in day today working.

DETAILED CONTENTS

1. OVERVIEW OF DATA COMMUNICATION AND NETWORKING :

Introduction; Data Communication; Components, data representation (ASCII, ISO, etc.). Direction of Gata Flow (Simples, Half duplex, Full duplex), Network; Distributed processing, Network criteria, Physical structure (Types of connection, Topology), Categories of network (LAN, MAN, WAN); Internet; Brief history, Internet today; Protocols and standards; Reference models; OSI reference model TCP/IP reference model, their comparative study.

2. PHYSICAL LAYER :

Overview of data (Analog and Digital), Singnal (Analog and Digital), Transmission (Analog and Digital) and Transmission media (Guided and Non-guided); TDM, FDM, WDM; Circuit switching; Time division and space division switch, TDM bus; Telephone network.

3. DATA LINK LAYER :

Types of errors, Framing (Character and bit stuffing), Error detection and Correction methods; Flow control; Protocols Stop and wait ARQ, Go-Back, NARQ, Selective repeat ARQ, HDLC.

Medium Access Sub Layer :

Point to point protocol, LCP, NCP, FDDI, Token bus, Toke ring; Reservation, Polling, Concetration; Multiple access protocols, CSMA,CSMA/CD, FDMA, TDMA, CDMA; Traditional Ethernet, Fast Ethernet.

4. NETWORK LAYER :

Corrected and Approved by B.T.E. On Dated 02.06.2015

Internetworking and devices : Repeaters, Hubs, Bridges, Switches, Router, Gateway; Addressing : Internet address, Classful address, Subnetting; Routing : Techniques, Static vs. dynamic routing, Routing table for classful address; Routing algorithms: Shortest path algorithm, Flooding, Distance vector routing, Link state routing; Protocols ARP, RARP, IP, ICMP, IPV6; Unicast and multicast routing protocols.

5. TRANSPORT LAYER :

Process to process delivery; UDP, TCP; Congestion control algorithm; Leaky bucket algorithm, Token bucket algorithm, Choke packets; Quality of service; Techniques to improve QoS.

6. SESSION LAYER :

Functioning of session layer, OSI primitives.

7. APPLICATION LAYER :

DNS;SMTP;SNMP;FTP; HTTP & WWW; Security; Cryptography, Use authentication, Security protocols in internet Firewalls

8. EMERGING TECHNOLOGIES IN NETWORKING :

ISDN services and ATM; DSL technology, Cable modem, Sonet wireless LAN: IEEE 802.11; Introduction to blue-tooth, VLAN's, Cellular telephony and Satellite network.

1. OVERVIEW OF DBMS :

Data, Representation of Data, Record, Data item, Field name, File, Data and Information, Database (Properties), Benefits of Database approach, Database Management System (Capabilities, Advantages, Disadvantages) and Functions of DBMS. Basic DBMS terminology (Data items, Entities and Attributes, Schema and Subschema, Database users, Instance and Schemas). Three views of Data (External View, Conceptual View, Internal View), Three level architecture of DBMS, Data Independence.

2. DATA MODELS :

Define data model, classify data model, Local Models : Object and Record based- Object Oriented Model- Entity relationship Models - Entity sets and relationship sets- Attributes - Keys in entity and relationship sets : (a) Super Key (b) Candidate Key (c) Primary Key (e) Unique Key - Mapping constraints. Object based logical models, E-R model, E-R diagram, Notations, Hierarchical Model (Advantage, Disadvantages), Network model (Advantages, Disadvantages), Relational Model (Advantages, Disadvantages), Object oriented database, Object oriented relational database.

3. RELATIONAL MODEL :

Corrected and Approved by B.T.E. On Dated 02.06.2015

Advantages, Disadvantages, Codd's 12 rules, Definition of Relations, Degree and Cardinality, Relational Model Constraints (Domain, Tuple Uniqueness, Key Constraints, Integrity Constraints, Entity constraints). Relations algebra (Basic operation : Union intersection and difference), Additional Relational Algebraic Operations (Projection, Selection rows, Division)

4. RELATIONAL DATABASE DESIGN :

Functional dependencies (I, II & III), Normal forms, Normalization, Boyce Codd Normal Form, Multivalued dependencies and Fourth Normal Form, Join Dependencies and Fifth normal forms.

5. STRUCTURE QUERY LANGUAGE (SQL) :

SQL, Object naming conventions, Object naming guidelines, Data types (Varchar 2, Number, Long, Date, Raw, Long Raw, Rowid, Char etc.), Tables, Views, Indexes, SQL Command :- DESCRIBE, SELECT, COLUMN ALIASES, CONCATENATION OPERATOR, DISTINCT CLAUSE, ORDER BY, WHERE CLAUSE, LOGICAL OPERATIONS, SQL OPERATORS.

6. DATABASE IMPLEMENTATION USERS:

Database integrity, Locking techniques for concurrency control, Concurrency control based in Time Stamp Ordering, Multiversion Concurrency control techniques, Database Security.

7. RATIONAL DATABASE :

Data definition language- Data manipulation language- Relational algebra - Operators : Select, Project, Join, Rename, etc. - Simple example.

8. SECURITY :

Authorization and View- Security constraints - Integrity Constraints- Encryption.

4. ENVIRONMENTAL IMPACT ASSESSMENT (EIA) :

- Basic concepts, objective and methodology of EIA.
- Objectives and requirement of Environmental Management System (ISO-14000) (An Introduction).

5. DISASTER MANAGEMENT :

Definition of disaster - Natural and Manmade, Type of disaster management, How disaster forms, Destructive power, Causes and Hazards, Case study of Tsunami Disaster, National policy- Its objective and main features, National Environment Policy, Need for central intervention, State Disaster Authority- Duties and powers, Case studies of various Disaster in the country, Meaning and benefit of vulnerability reduction, Factor promoting vulnerability reduction and mitigation, Emergency support function plan.

Main feature and function of National Disaster Management Frame Work, Disaster mitigation and prevention, Legal Policy Frame Work, Early warning system, Human Resource Development and Function, Information dissemination and communication.

4.5 (i)PROJECT WORK

L T P
- - 8

1. OBJECTIVES

1. To provide experience of solving practical problems.
2. To provide synthesis of knowledge to solve problems.
3. To provide group working environment.

2. NATURE OF THE PROJECTS

The project should be a group project, preferably of interest to industry. The students should be encouraged to select the project while on visits to such industry. The project should be supervised by the teacher or the expert from industry jointly. The project work should involve designing the application system and implementing it on any of the computer systems available.

At the end of the project, the student is expected to prepare report. The evaluation should be based on:

1. Continuous assesment of the work done by the student;
2. Project report, and
3. Viva-Voce.

4.5 (ii) INDUSTRIAL TRAINING

(One month After I YEAR during summer vacation)

OBJECTIVES :

TO enables the student to ;

1. experience the real life computer environment.
2. see the practical problems and the process of their solution.
3. work in groups.
4. find suitable problem of interest for project work.

The industrial training will be of 8 weeks duration. It should be organised at the end of the course.

The industrial training may be organised at reputed large computer centres where scientific/commercial data processing jobs are being done. The training schedule may be drawn in such a way that the student may observe the work of the system analysts, the system programmers and the operators. They may also study the environment of the computer centre, the job flow and the associated procedures. Special attention should be paid so that the students may observe the documentation and organisation of the computer centre activities.

The students should prepare a report on the industrial training. The report and the viva-voce of the industrial training along with the assessment of the training supervisors of the industry and the teacher monitoring the training shall form the basis of award of marks.

4.3 iii)

SEMINAR

Seminar will be organised for all students individually on Computer based Topic by Internal Examiner.
